## Ely Ouse Hydroacoustic Survey

04/06/2019 - 07/06/2019

Mean density estimates produced for each pass along the channel were quite close at 68.3 Ind./1000m<sup>3</sup> on the downstream run and 70.3 Ind./1000m<sup>3</sup> on the upstream, with a mean population density of 69.3 Ind./1000m<sup>3</sup>. The 2019 population estimate is a considerable increase over the 2018 result and is more closely comparable to that observed previously in 2017.
