

Fantastic Fishing as KLAA waters continue to provide outstanding sport on most venues. Brilliant catches of bream and tench with feeder and tip the go to method. Question with a lot of fish around do you stick with a feeder , which given the size of the fish the contents will be be devoured in seconds or do you add more feed with a catapult? Then the groundbait falling through the water may bring the fish off the bottom. Ideally if you have prebaited then there is enough feed to hold the shoal?

Relief Channel the best but even so days and catches are very variable. The current wet and cool weather probably helping those who can fish at any time. I can remember the days when you looked forward to a weekends fishing only to be undone by unsuitable conditions.

Dan Goult with his Relief Chanel catch.

Paul Goult with his Relief Channel tench.

The Cut Off Channel surprising anglers with great catches of bream to 80lb, with an occasional tench to.

The Middle Level still good with several sections producing bream and a few obligatory tench. St Mary's, and Crooked the best.

KLAA members are certainly spoilt for choice.
