

A Hot Middle Level peg last week, but not so good this week.

Despite the super-hot conditions fishing has not been bad. Ten Mile still going great, with nets over 20lb, 100 fish for 23lb on the pole, one of the best. Whatever method anglers seem to be catching well. With matches coming up, there are anglers about on the Ouse. Worm, rather than pinkies or maggots, tempting the better fish. It's good to use caster and worm but casters are in short supply, unless you turn your own. Reminds me when we used to get hearts from the butchers and breed gozzers for the bream, forgotten how now.

Top Ten Mile catch

Middle Level quiet this week, with bailiffs reporting few anglers about. Then again, If you're not on the bank you won't catch.

Daniel Coote visiting again from Nottingham, On the Lakes Springside

On the Lakes Springside going well carp catching on all methods.

Bear Lake as usual fishing brilliantly, keeping anglers happy.

Shepherds Lake, very variable from day to day. Kings Lake for some good bream but please do not keep fish in the shallow hot water in nets close to the bank.

Daniel Coote visiting again from Nottingham and still catching some super carp from Shepherds Lake including the one above.

The latest and last Middle Level evening Neeps match won by Tim Bates with 9lb 1 1/4 oz of roach and skimmers on the pole.

Ashley has been busy clearing swims on the Middle Level, giving members more choice of swims, however, this swim clearing has revealed the amount of rubbish left by anglers, Hemp tins, Empty groundbait bags and the like are rubbish left only by anglers not the general public. **Please** take your rubbish home, as the powers that be, are not happy, and it could result in losing our fishing.

Sorry another problem with all the sun is carp anglers putting their fish on dry hot carp mats, obviously not a good idea. Please, use and make sure your mats/ cradles are wet.

The Angling Trust have issued a warning regarding high temperature, low oxygen levels and fish health. Such conditions are perfect for outbreaks of disease such as KHV which can destroy a fishery. So, take care, look after the fish, and report fish in distress.

Anglia water working over the next few weeks in the St Germans area that may affect, or slow access to the Middle Level
