

Two Ten Mile Nets

Skimmers on the Slider

Rudd on the tip

Margin fishing appears to be getting the best results on the Middle Level whether whip, pole or feeder. Possibly because the drain edge was not so disturbed as the middle when dredging was done. The reed and vegetation is still in the margins providing cover and food source. Several specimen perch and rudd catches pleasing several anglers.

Gt Ouse Ten Mile Bank Still going well with double figure (lbs) weight catches on all methods. Two adjacent peg catches I saw were a puzzle. Predominantly a Rudd catch on the tip and feeder next to a slider catch of skimmers up in the water. Who said Rudd are surface feeders and bream bottom feeders. Either way a great days fishing for both anglers.

Another great method with JW catching 200 fish for around 30lb of predominately roach on the 6m whip this week. Regular helpings of groundbait the key. It will be interesting to see how the

Littleport section fishes for the Winter League practice and the 1st round of the Winter League over the next few weeks, will the better fish have moved there as winter approaches. Let us hope that the fish remain at Ten mile as winter and the colder weather approaches. Hopefully with more anglers on the bank the fish will have little cause to move. It appears there are few catches on the Relief Channel, whilst it's all small fish on the Cut Off Channel.

Shepherds another carp hits the net.

The KLAA lakes continue to fish well, probably as well as they have ever done. Bear lake going from strength to strength. The new and safer platforms finding favour with members, mind they were not cheap, helped by a grant from the Environment Agency but well worth the investment. Springside yet to receive similar treatment to make it more comfortable and safer. Shepherds some good some not so good days but fish are being caught all round the lake, often close to the bank. Chub carp and bream showing. Kings continues to surprise with good bream catches. Anglers having some entertaining times when the small 2 to 3lb decided to feed, decent roach at times to. Carp anglers not being outdone are finding some excellent fish.

Springside less anglers than the other waters but still fish being caught best a 31lb carp.

Message from the Environment Agency East Midlands Fisheries Team

We have recently received several reports of anglers leaving rods unattended while fishing.

Please remember that under the National Rod Fishing Licence Byelaws, anglers must remain in control of their rod and line at all times. Leaving rods unattended with baits and hooks in the water is an offence and may result in enforcement action.

Aside from being illegal, unattended rods can cause unnecessary harm to fish and wildlife. When you fish with multiple rods and lines, you must place each rod close together so that the total distance between the outermost fishing rods and the angler does not exceed 3 metres.

Please fish responsibly and ensure your rod is always attended.
