

A Brilliant Kingfisher photo on Ten Mile
Plenty of fish for them if not large enough fish for anglers.

Few good nets on local waters during the last week with anglers reportedly struggling for fish on the Middle Level. St Germans busy as anglers get out before winter and with rain likely sport can change quickly. Predator anglers searching for that big one but most catching jacks. Two specimen pike at 18 and 22lb reported worth the effort.

Lots of fish on the Ouse whatever method you choose to fish but no big weights. Small fish on many sections on the Relief Channel but a 100lb catch above Magdalen Bridge, way out in front. With the clearer water deterring the bream, roach and dace have been active on the feeder at times. 32 fish for 21lb shown but not the best photo but quality fish, nevertheless. On the Relief Channel there is always a chance of big fish turning up to give you a red-letter day. If you are on the bank, you could be lucky. Lots of fish on the Cut Off but after some recent good nets it's been small fish here too during the last week.

A brilliant roach and dace net on the R Channel.

I see Dave Coster who used to write regularly in the Anglers Mail has been doing various features on You Tube particularly one entitled Fishery Focus. The Middle Level is supported by Cadence Fishing UK. Could be worth a look for new and experienced anglers.

Last week's Winter League practice at Littleport was won with 22lb 8oz with good weights in most sections, anglers practicing since have also enjoyed some good sport.

28lb 12oz was needed to win the first round of the winter league on Sunday with lots of double figure weights with a couple of harder sections in a field of 80 anglers Can't be 20lb in every peg on a river but if sections are competitive that's good.

Next round is on the same venue this coming Sunday.

Norwich and District Angling Association finish their very busy match schedule with the Broads Open last month 34lb required to win with good weights in all sections

Last Julys EA survey of fish densities is available on the KLAA web site under EA surveys. Essentially more fish were recorded at Denver, Downham Market and Magdalen sections with poor results towards Saddlebow, however, we know that fish are always on the move on the Channel, so you never know although better fishing usually coincides with windy, dull, cloudy days.

Plenty of fish on the KLAA Lakes, Springside busy but no 30lb carp this week.

28lb 8oz from Shepherds is the best reported this week but several good twenties too. Variable sport at times here as usual you just need to choose the time and pegs where and when the fish are feeding, not an easy choice.

Bear lake fishing well, more fish caught in the margins than in the open water. I am told the lake has been busy all week but when I bailiffed on Sunday only one angler on the bank here.

Kings Lake going well with many anglers giving it a go judging by the worn path alongside the lake. Carp of all sizes , chunky roach and lots of Bream keeping anglers more than happy.

Joel Grange with a Mirror Carp on a glorious Sunday evening.
